- To get to relevant articles, the article suggests searching the leading journals for articles. It mentions search in journal databases as search method as well. Does there exist a unified search engine that gathers journals online for search?
  - [Follow up] Searching the Web of Science (<http://www.webofscience.com>) is mentioned, as a means to find where already discovered articles are cited. Are there no relevancy in searching the web directly?
- What are the key elements of writing a literature review.
- What should we as reviewers look for in an article?
- Why is it important to “identify the values bounding a theory- that is, your implicit assumptions concerning whose interest are served”, in other words identify stakeholders?
- Is the tense of the article really a primary concern?
  - And what do you do with the tense if an author has changed his opinion since an article was published? Should you still use present tense?
- Is it a good thing to notify other scholars of opportunities for key contributions by highlighting discrepancies between what we know and what we need to know? Would it not be better to hold such things to oneself, creating opportunities for new articles?
- Is it possible for process and variance research on one topic to be independent?
- What is important with the tone of the article.
